

Reminder.

Reference: all types (class, list, dict).

tuple  $\Rightarrow$  doesn't support changes.

Set  $\Rightarrow$  no exact position.

column: [a:b]  $\Rightarrow$  [column[a], ..., column[b]]

strip: only works for the position at the end  
(pos[0]/pos[-1]).

e.g.

S = "123\$!"

print(S.rstrip("!\$"))

>>> 123.

↑  
from the right

(lstrip)

print(S.strip("23"))

>>> 123\$!
