

# The Foundations: Logic and Proofs

## Chapter 1, Part I: Propositional Logic

© Peter Valovcik 2021

UWO – January 10, 2021

# Chapter Summary

- ① Part I: Propositional Logic
  - a The Language of Propositions
  - b Applications
  - c Logical Equivalences
- ② Part II: Predicate Logic
  - a The Language of Quantifiers
  - b Logical Equivalences
  - c Nested Quantifiers
- ③ Part III: Proofs
  - a Rules of Inference
  - b Proof Methods
  - c Proof Strategy

# Plan for Part I

## 1. The Language of Propositions

1.1 Propositions

1.2 Connectives

1.3 Truth Tables and Compound Propositions

## 2. Applications

2.1 Translating English to Propositional Logic

2.2 System Specifications

2.3 Logic Puzzles

2.4 Logic Circuits

## 3. Propositional Equivalences

3.1 Tautologies, Contradictions, and Contingencies

3.2 Logical Equivalence

3.3 Propositional Satisfiability

# Plan for Part I

### 3.1 Tautologies, Contradictions, and Contingencies

### 3.2 Logical Equivalence

### 3.3 Propositional Satisfiability

# Propositions

- ① A *proposition* is a declarative sentence that is either true or false.
- ② Examples of propositions:
  - a The Moon is made of green cheese.
  - b Toronto is the capital of Canada.
  - c  $1 + 0 = 1$
  - d  $0 + 0 = 2$
- ③ Examples that are not propositions:
  - a Sit down!
  - b What time is it?
  - c  $x + 1 = 2$
  - d  $x + y = z$

# Propositional Logic

## 1 Constructing Propositions formally

- a The proposition that is always true, denoted by **T**, and the proposition that is always false, denoted by **F**.
- b Propositional variables, usually denoted  $p, q, r, s$ , take values **T** or **F**.
- c Compound Propositions; constructed from other propositions by means of *logical connectives*:
  - 1 Negation  $\neg$
  - 2 Conjunction  $\wedge$
  - 3 Disjunction  $\vee$
  - 4 Implication  $\rightarrow$
  - 5 Biconditional  $\leftrightarrow$  :??

## 2 Examples of formal propositions

- a **T**,
- b  $p \vee q$ ,
- c  $(p \vee q) \wedge (p \vee \neg q)$ ,
- d  $(p \rightarrow q) \leftrightarrow (\neg p \vee q)$ .

# Plan for Part I

## 1. The Language of Propositions

1.1 Propositions

1.2 Connectives

1.3 Truth Tables and Compound Propositions

## 2. Applications

2.1 Translating English to Propositional Logic

2.2 System Specifications

2.3 Logic Puzzles

2.4 Logic Circuits

## 3. Propositional Equivalences

3.1 Tautologies, Contradictions, and Contingencies

3.2 Logical Equivalence

3.3 Propositional Satisfiability

# Compound Propositions: Negation

- ① The *negation* of a proposition  $p$  is denoted by  $\neg p$  and has this truth table:

$p$	$\neg p$
T	F
F	T

- ② **Example:** If  $p$  denotes “The earth is round.”, then  $\neg p$  denotes “It is not the case that the earth is round,” or more simply “The earth is not round.”

# Conjunction

- ① The *conjunction* of propositions  $p$  and  $q$  is denoted by  $p \wedge q$  and has this truth table:

$p$	$q$	$p \wedge q$
T	T	T
T	F	F
F	T	F
F	F	F

- ② **Example:** If  $p$  denotes “I am at home.” and  $q$  denotes “It is raining.” then  $p \wedge q$  denotes “I am at home and it is raining.”

# Disjunction

- ① The *disjunction* of propositions  $p$  and  $q$  is denoted by  $p \vee q$  and has this truth table:

$p$	$q$	$p \vee q$
T	T	T
T	F	T
F	T	T
F	F	F

- ② **Example:** If  $p$  denotes “I am at home.” and  $q$  denotes “It is raining.” then  $p \vee q$  denotes “I am at home or it is raining.”

# In English “or” has two distinct meanings

## 1 “Inclusive Or”

- a In the sentence “Students who have taken CS202 or Math120 may take this class,” we assume that students need to have taken one of the prerequisites, but may have taken both.
- b This is the meaning of disjunction.
- c For  $p \vee q$  to be true, either one or both of  $p$  and  $q$  must be true.

## 2 “Exclusive Or”

- a When reading the sentence “Soup or salad comes with this entr(e)e,” we do not expect to be able to get both soup and salad.
- b This is the meaning of Exclusive Or (Xor).
- c In  $p \oplus q$ , one of  $p$  and  $q$  must be true, but not both. The truth table for  $\oplus$  is:

p	q	$p \oplus q$
T	T	F
T	F	T
F	T	T
F	F	F

# Implication

- ① If  $p$  and  $q$  are propositions, then  $p \rightarrow q$  is a *conditional statement* or *implication* which is read as “if  $p$ , then  $q$ ” and has this truth table:

$p$	$q$	$p \rightarrow q$
T	T	T
T	F	F
F	T	T
F	F	T

- ② **Example:** If  $p$  denotes “I am at home.” and  $q$  denotes “It is raining.” then  $p \rightarrow q$  denotes “If I am at home then it is raining.”
- ③ In  $p \rightarrow q$ ,  $p$  is the *hypothesis* (*antecedent* or *premise*) and  $q$  is the *conclusion* (or *consequence*).

# Understanding Implication

- ① In  $p \rightarrow q$  there does not need to be any connection between the antecedent or the consequent.
- ② The “meaning” of  $p \rightarrow q$  depends only on the truth values of  $p$  and  $q$ .
- ③ These implications are perfectly fine, but would not be used in ordinary English:
  - a “If the moon is made of green cheese, then I have more money than Bill Gates. ”
  - b ““If  $1 + 1 = 3$ , then my grandma wears combat boots.”

# Understanding Implication (cont)

- ① One way to view the logical conditional is to think of an obligation or contract.
  - a “If I am elected, then I will suppress income tax.”
- ② If the politician is elected and does not suppress income tax, then the voters can say that the politician has broken the campaign pledge.

# Different Ways of Expressing $p \rightarrow q$

- 1 if  $p$ , then  $q$
- 2  $p$  implies  $q$
- 3 if  $p$ ,  $q$
- 4  $p$  only if  $q$
- 5  $q$  unless  $\neg p$
- 6  $q$  when  $p$
- 7  $q$  if  $p$
- 8  $q$  when  $p$
- 9  $q$  whenever  $p$
- 10  $p$  is sufficient for  $q$
- 11  $q$  follows from  $p$
- 12  $q$  is necessary for  $p$
- 13 a necessary condition for  $p$  is  $q$
- 14 a sufficient condition for  $q$  is  $p$

# Converse, Contrapositive, and Inverse

- ① From  $p \rightarrow q$  we can form new conditional statements .
  - Ⓐ  $q \rightarrow p$  is the **converse** of  $p \rightarrow q$ ,
  - Ⓑ  $\neg q \rightarrow \neg p$  is the **contrapositive** of  $p \rightarrow q$ ,
  - Ⓒ  $\neg p \rightarrow \neg q$  is the **inverse** of  $p \rightarrow q$ .
- ② **Example:** Find the converse, inverse, and contrapositive of “It is raining is a sufficient condition for my not going to town.”

# Converse, Contrapositive, and Inverse

- ① From  $p \rightarrow q$  we can form new conditional statements .
  - a  $q \rightarrow p$  is the **converse** of  $p \rightarrow q$
  - b  $\neg q \rightarrow \neg p$  is the **contrapositive** of  $p \rightarrow q$
  - c  $\neg p \rightarrow \neg q$  is the **inverse** of  $p \rightarrow q$
- ② **Example:** Find the converse, contrapositive, and inverse of “It raining is a sufficient condition for my not going to town.”
- ③ **Solution:**
  - a **converse:** If I do not go to town, then it is raining.
  - b **contrapositive:** If I go to town, then it is not raining.
  - c **inverse:** If it is not raining, then I will go to town.

# Biconditional

- 1 If  $p$  and  $q$  are propositions, then we can form the *biconditional* proposition  $p \leftrightarrow q$ , read as “ $p$  if and only if  $q$  .”
- 2 The biconditional  $p \leftrightarrow q$  denotes the proposition with this truth table:

$p$	$q$	$p \leftrightarrow q$
T	T	T
T	F	F
F	T	F
F	F	T

- 3 If  $p$  denotes “I am at home.” and  $q$  denotes “It is raining.” then  $p \leftrightarrow q$  denotes “I am at home if and only if it is raining.”

# Expressing the Biconditional

- ① Some alternative ways “ $p$  if and only if  $q$ ” is expressed in English:
  - a  $p$  is necessary and sufficient for  $q$
  - b if  $p$  then  $q$  , and conversely
  - c  $p$  iff  $q$

# Plan for Part I

## 1. The Language of Propositions

1.1 Propositions

1.2 Connectives

1.3 Truth Tables and Compound Propositions

## 2. Applications

2.1 Translating English to Propositional Logic

2.2 System Specifications

2.3 Logic Puzzles

2.4 Logic Circuits

## 3. Propositional Equivalences

3.1 Tautologies, Contradictions, and Contingencies

3.2 Logical Equivalence

3.3 Propositional Satisfiability

# Truth Tables For Compound Propositions

- 1 Construction of a truth table:
  - a It need a row for every possible combination of values for the atomic propositions.
  - b It needs a column for the compound proposition (usually at far right)
  - c It also needs a column for the truth value of each sub-expression that occurs in the compound proposition as it is built up.
  - d This includes the atomic propositions

# Example of a Truth Table

**Exercise:** Construct a truth table for  $p \vee q \rightarrow \neg r$

$p$	$q$	$r$	$\neg r$	$p \vee q$	$p \vee q \rightarrow \neg r$
T	T	T	F	T	F
T	T	F	T	T	T
T	F	T	F	T	F
T	F	F	T	T	T
F	T	T	F	T	F
F	T	F	T	T	T
F	F	T	F	F	T
F	F	F	T	F	T

# Equivalent Propositions

- 1 Two propositions are logically *equivalent* if they always have the same truth value. (notation  $A \equiv B$  )
- 2 **Example:** Show using a truth table that the *implication* is equivalent to the *contrapositive*.
- 3 **Solution:**

p	q	$\neg p$	$\neg q$	$p \rightarrow q$	$\neg q \rightarrow \neg p$
T	T	F	F	T	T
T	F	F	T	F	F
F	T	T	F	T	T
F	F	T	T	T	T

$$p \rightarrow q \equiv \neg q \rightarrow \neg p$$

# Using a Truth Table to Show Non-Equivalence

- 1 **Example:** Show using truth tables that neither the *converse* nor *inverse* of an implication are equivalent to the *implication*
- 2 **Solution:**

p	q	$\neg p$	$\neg q$	$p \rightarrow q$	$q \rightarrow p$	$\neg p \rightarrow \neg q$
T	T	F	F	T	T	T
T	F	F	T	F	T	T
F	T	T	F	T	F	F
F	F	T	T	T	T	T

NOTE: *converse* and *inverse* are equivalent to each other

## Extra exercise:

Prove that *biconditional*  $p \leftrightarrow q$  is equivalent to the conjunction of *implication*  $p \rightarrow q$  and its *converse*  $q \rightarrow p$ , which is  $(p \rightarrow q) \wedge (q \rightarrow p)$

# Problem

- 1 How many rows are there in a truth table with  $n$  propositional variables?

# Problem

- ① How many rows are there in a truth table with  $n$  propositional variables?
- ② **Solution:**  $2^n$  We will see how to do this in Chapter 6.
- ③ Note that this means that with  $n$  propositional variables, we can construct  $2^{n+1}$  distinct (i.e., not equivalent) propositions. Indeed, for each row, a given proposition is either true or false.

# Precedence of Logical Operators

Operator	Precedence
$\neg$	1
$\wedge$	2
$\vee$	3
$\rightarrow$	4
$\leftrightarrow$	5

- ①  $p \vee q \rightarrow \neg r$  is equivalent to  $(p \vee q) \rightarrow \neg r$
- ② If the intended meaning is  $p \vee (q \rightarrow \neg r)$  then parentheses must be used.

# Translating English Sentences

- ① Steps to convert an English sentence to a statement in propositional logic
  - a Identify *atomic* propositions and represent using propositional variables.
  - b Determine appropriate logical connectives
- ② “If I go to Harry’s or to the country, I will not go shopping.”

State {  
English |  
Symbolic. |

- a  $p$ : I go to Harry’s
- b  $q$ : I go to the country.
- c  $r$ : I will go shopping.
- d If  $p$  or  $q$  then not  $r$
- e  $(p \vee q) \rightarrow \neg r$

# Example

- ① **Problem:** Translate the following sentence into propositional logic:
- ② “You can access the Internet from campus only if you are a computer science major or you are not a freshman.”

1.  $p$
2.  $q$
3.  $r$
4. if  $p$  then  $q$  or not  $r$
5.  $p \rightarrow (q \vee \neg r)$

# Example

- ① **Problem:** Translate the following sentence into propositional logic:
- ② “You can access the Internet from campus only if you are a computer science major or you are not a freshman.”
- ③ **One Solution:** Let  $a$ ,  $c$ , and  $f$  represent respectively “You can access the internet from campus,” “You are a computer science major,” and “You are a freshman.”
- ④  $a \rightarrow (c \vee \neg f)$

# Plan for Part I

1.2 Connectives

1.3 Truth Tables and Compound Propositions

## 2. Applications

2.1 Translating English to Propositional Logic

2.2 System Specifications

2.3 Logic Puzzles

2.4 Logic Circuits

## 3. Propositional Equivalences

3.1 Tautologies, Contradictions, and Contingencies

3.2 Logical Equivalence

3.3 Propositional Satisfiability

# System Specifications

- ① System and Software engineers take requirements in English and express them in a precise specification language based on logic.
- ② **Example:** Express in propositional logic: “The automated reply cannot be sent when the file system is full”
- ③ **Solution:** One possible solution: Let  $p$  denote “The automated reply can be sent” and  $q$  denote “The file system is full.”
- ④  $q \rightarrow \neg p$

# Consistent System Specifications

- 1 **Definition:** A list of propositions is *consistent* if it is possible to assign truth values to the proposition variables so that each proposition is true.
- 2 **Exercise:** Are these specifications consistent?
  - a “The diagnostic message is stored in the buffer or it is retransmitted.”
  - b “The diagnostic message is not stored in the buffer.”
  - c “If the diagnostic message is stored in the buffer, then it is retransmitted.”

# Consistent System Specifications

- 1 **Definition:** A list of propositions is *consistent* if it is possible to assign truth values to the proposition variables so that each proposition is true.
- 2 **Exercise:** Are these specifications consistent?
  - a “The diagnostic message is stored in the buffer or it is retransmitted.”
  - b “The diagnostic message is not stored in the buffer.”
  - c “If the diagnostic message is stored in the buffer, then it is retransmitted.”
- 3 **Solution:**
  - a Let  $p$  denote “The diagnostic message is stored in the buffer.”
  - b Let  $q$  denote “The diagnostic message is retransmitted”.
  - c The specification can be written as:  $p \vee q, \neg p, p \rightarrow q$ .
  - d When  $p$  is false and  $q$  is true all three statements are true. So the specification is consistent.
- 4 **New Exercise:** What if “The diagnostic message is not retransmitted” is added?
- 5 **New Solution:** Now we are adding  $\neg q$  and there is no satisfying assignment. So the specification is not consistent.

## 3. Propositional Equivalences

3.1 Tautologies, Contradictions, and Contingencies

3.2 Logical Equivalence

3.3 Propositional Satisfiability

# Logic Puzzles

- ① An island has two kinds of inhabitants, *knights*, who always tell the truth, and *knaves*, who always lie.
- ② You go to the island and meet A and B.
  - a A says “B is a knight.”
  - b B says “The two of us are of opposite types.”
- ③ **Puzzle :** What are the types of A and B?

**Figure:** “Man can never eliminate the necessity of using his own intelligence, regardless of how cleverly he tries!” — Raymond M. Smullyan (May 25, 1919 – February 6, 2017), *The Gödelian Puzzle Book: Puzzles, Paradoxes and Proofs*

# Logic Puzzles

- ① An island has two kinds of inhabitants, *knights*, who always tell the truth, and *knaves*, who always lie.
- ② You go to the island and meet A and B.
  - a A says “B is a knight.”
  - b B says “The two of us are of opposite types.”
- ③ **Puzzle :** What are the types of A and B?
- ④ **Solution:** Let  $p$  and  $q$  be the statements that A is a knight and B is a knight, respectively. So, then  $\neg p$  represents the proposition that A is a knave and  $\neg q$  that B is a knave.
  - a If A is a knight, then  $p$  is true. Since knights tell the truth,  $q$  must also be true. Then  $(p \wedge \neg q) \vee (\neg p \wedge q)$  would have to be true, but it is not. So, A is not a knight and therefore  $\neg p$  must be true.
  - b If A is a knave, then B must not be a knight since knaves always lie. So, then both  $\neg p$  and  $\neg q$  hold since both are knaves.

3.2 Logical Equivalence

3.3 Propositional Satisfiability

# Logic Circuits (Studied in depth in CS2209)

- 1 Electronic circuits; each input/output signal can be viewed as a 0 or 1.
  - a 0 represents **False**
  - b 1 represents **True**
- 2 Complicated circuits are constructed from three basic circuits called gates.

- a The inverter (**NOT gate**) takes an input bit and produces the negation of that bit.
- b The **OR gate** takes two input bits and produces the value equivalent to the disjunction of the two bits.
- c The **AND gate** takes two input bits and produces the value equivalent to the conjunction of the two bits.

# Logic Circuits (Studied in depth in CS2209)

More complicated digital circuits can be constructed by combining these basic circuits to produce the desired output given the input signals by building a circuit for each piece of the output expression and then combining them. For example:

2.2 System Specifications

2.3 Logic Puzzles

2.4 Logic Circuits

## 3. Propositional Equivalences

3.1 Tautologies, Contradictions, and Contingencies

3.2 Logical Equivalence

3.3 Propositional Satisfiability

# Logical Equivalence

- ① Two compound propositions  $p$  and  $q$  are logically equivalent if  $p \leftrightarrow q$  is a *tautology*.
- ② We write this as  $p \Leftrightarrow q$  or as  $p \equiv q$  where  $p$  and  $q$  are compound propositions.
- ③ Two compound propositions  $p$  and  $q$  are equivalent if and only if the columns in a truth table giving their truth values agree.
- ④ The truth table below shows that  $\neg p \vee q$  is equivalent to  $p \rightarrow q$ :

$p$	$q$	$\neg p$	$\neg p \vee q$	$p \rightarrow q$
T	T	F	T	T
T	F	F	F	F
F	T	T	T	T
F	F	T	T	T

# De Morgan's Laws

$$\neg(p \wedge q) \equiv \neg p \vee \neg q$$

$$\neg(p \vee q) \equiv \neg p \wedge \neg q$$

**Figure:** *"I did not hear what you said, but I absolutely disagree with you."* –Attributed to Augustus De Morgan (1806-1871) in: August Stern (1994). *The Quantum Brain: Theory and Implications*. North-Holland/Elsevier. p. 7

# De Morgan's Laws

$$\neg(p \wedge q) \equiv \neg p \vee \neg q$$

$$\neg(p \vee q) \equiv \neg p \wedge \neg q$$

The truth table below shows that De Morgan's Second Law holds:

p	q	$\neg p$	$\neg q$	$(p \vee q)$	$\neg(p \vee q)$	$\neg p \wedge \neg q$
T	T	F	F	T	F	F
T	F	F	T	T	F	F
F	T	T	F	T	F	F
F	F	T	T	F	T	T

# Key Logical Equivalences

## 1 Identity Laws:

a  $p \wedge T \equiv p$

b  $p \vee F \equiv p$

## 2 Domination Laws:

a  $p \vee T \equiv T$

b  $p \wedge F \equiv F$

## 3 Idempotent laws:

a  $p \vee p \equiv p$

b  $p \wedge p \equiv p$

## 4 Double Negation Law:

a  $\neg(\neg p) \equiv p$

## 5 Negation Laws:

a  $p \vee \neg p \equiv T$

b  $p \wedge \neg p \equiv F$

# Key Logical Equivalences (*cont*)

## 1 Commutative Laws:

a  $p \vee q \equiv q \vee p$

b  $p \wedge q \equiv q \wedge p$

## 2 Associative Laws:

a  $(p \wedge q) \wedge r \equiv p \wedge (q \wedge r)$

b  $(p \vee q) \vee r \equiv p \vee (q \vee r)$

## 3 Distributive Laws:

a  $(p \vee (q \wedge r)) \equiv (p \vee q) \wedge (p \vee r)$

b  $(p \wedge (q \vee r)) \equiv (p \wedge q) \vee (p \wedge r)$

## 4 Absorption Laws:

a  $p \vee (p \wedge q) \equiv p$

b  $p \wedge (p \vee q) \equiv p$

# More Logical Equivalences

**TABLE 7** Logical Equivalences Involving Conditional Statements.

$$p \rightarrow q \equiv \neg p \vee q$$

$$p \rightarrow q \equiv \neg q \rightarrow \neg p$$

$$p \vee q \equiv \neg p \rightarrow q$$

$$p \wedge q \equiv \neg(p \rightarrow \neg q)$$

$$\neg(p \rightarrow q) \equiv p \wedge \neg q$$

$$(p \rightarrow q) \wedge (p \rightarrow r) \equiv p \rightarrow (q \wedge r)$$

$$(p \rightarrow r) \wedge (q \rightarrow r) \equiv (p \vee q) \rightarrow r$$

$$(p \rightarrow q) \vee (p \rightarrow r) \equiv p \rightarrow (q \vee r)$$

$$(p \rightarrow r) \vee (q \rightarrow r) \equiv (p \wedge q) \rightarrow r$$

**TABLE 8** Logical Equivalences Involving Biconditional Statements.

$$p \leftrightarrow q \equiv (p \rightarrow q) \wedge (q \rightarrow p)$$

$$p \leftrightarrow q \equiv \neg p \leftrightarrow \neg q$$

$$p \leftrightarrow q \equiv (p \wedge q) \vee (\neg p \wedge \neg q)$$

$$\neg(p \leftrightarrow q) \equiv p \leftrightarrow \neg q$$

These valid logical equivalences could be used as a **valid argument form** in proofs (later)

# More Logical Equivalences

$$(p \wedge (p \rightarrow q)) \rightarrow q \equiv T$$

$p$	$q$	$p \rightarrow q$	$p \wedge (p \rightarrow q)$	$(p \wedge (p \rightarrow q)) \rightarrow q$
T	T	T	T	T
T	F	F	F	T
F	T	T	F	T
F	F	T	F	T

- 1 The tautology above is known as “**Modus Podens**” (one of the rules of inference)
- 2 It establishes validity of the following argument form:

**if  $p$  and  $p \rightarrow q$  then  $q$**

# Constructing New Logical Equivalences

- ① We can show that two expressions are logically equivalent by developing a series of logically equivalent statements.
- ② To prove that  $A \equiv B$  we produce a series of equivalences beginning with  $A$  and ending with  $B$ :

$$A \equiv A_1$$

$$\vdots$$

$$A_n \equiv B$$

- ③ Keep in mind that whenever a proposition (represented by a propositional variable) occurs in the equivalences listed earlier, it may be replaced by an arbitrarily complex compound proposition.

# Equivalence Proofs

**Example:** Show that  $\neg(p \vee (\neg p \wedge q))$  is logically equivalent to  $\neg p \wedge \neg q$

# Equivalence Proofs

**Example:** Show that  $\neg(p \vee (\neg p \wedge q))$  is logically equivalent to  $\neg p \wedge \neg q$

**Solution:**

$\neg(p \vee (\neg p \wedge q))$	$\equiv$	$\neg p \wedge \neg(\neg p \wedge q)$	by 2nd De Morgan law
	$\equiv$	$\neg p \wedge (\neg(\neg p) \vee \neg q)$	by first De Morgan law
	$\equiv$	$\neg p \wedge (p \vee \neg q)$	by double negation law
	$\equiv$	$(\neg p \wedge p) \vee (\neg p \wedge \neg q)$	by 2nd distrib. law
	$\equiv$	$F \vee (\neg p \wedge \neg q)$	by the negation law
	$\equiv$	$(\neg p \wedge \neg q) \vee F$	by commutative law for disjunction
	$\equiv$	$(\neg p \wedge \neg q)$	by identity law for F

# Equivalence Proofs

**Example:** Show that  $(p \wedge q) \rightarrow (p \vee q)$  is a tautology.

# Equivalence Proofs

**Example:** Show that  $(p \wedge q) \rightarrow (p \vee q)$  is a tautology.

**Solution:**

$$\begin{aligned}(p \wedge q) \rightarrow (p \vee q) &\equiv \neg(p \wedge q) \vee (p \vee q) && \text{by truth table for } \rightarrow \\ &\equiv (\neg p \vee \neg q) \vee (p \vee q) && \text{by first De Morgan law} \\ &\equiv (\neg p \vee p) \vee (\neg q \vee q) && \text{by associative and commutative} \\ &&& \text{laws for disjunction} \\ &\equiv T \vee T && \text{by truth tables} \\ &\equiv T && \text{by domination law}\end{aligned}$$

## 3. Propositional Equivalences

3.1 Tautologies, Contradictions, and Contingencies

3.2 Logical Equivalence

3.3 Propositional Satisfiability

# Propositional Satisfiability

- ① A compound proposition is *satisfiable* if there is an assignment of truth values to its variables that make it true.
- ② When no such assignments exist, the compound proposition is *unsatisfiable*.
- ③ A compound proposition is *unsatisfiable* if and only if its negation is a *tautology*.
- ④ A compound proposition is *unsatisfiable* if and only if it is a *contradiction*.

# Questions on Propositional Satisfiability

**Example:** Determine the satisfiability of the following compound propositions:

①  $(p \vee \neg q) \wedge (q \vee \neg r) \wedge (r \vee \neg p)$

**Solution:** Satisfiable. Assign **T** to  $p$ ,  $q$ , and  $r$ .

②  $(p \vee q \vee r) \wedge (\neg p \vee \neg q \vee \neg r)$

**Solution:** Satisfiable. Assign **T** to  $p$  and **F** to  $q$ .

③  $(p \vee \neg q) \wedge (q \vee \neg r) \wedge (r \vee \neg p) \wedge (p \vee q \vee r) \wedge (\neg p \vee \neg q \vee \neg r)$

**Solution:** Not satisfiable. Check each possible assignment of truth values to the propositional variables and none will make the proposition true.
