Algorithm Topological Ordering (G)

In: Directed graph $G=(V,E)$

Out: Topological ordering for the vertices of G

$Q \leftarrow$ empty queue } C_2

For each node u of G do } $C_1 n$
 if $u.in-degree = 0$ then } C_1
 $Q.enqueue(u)$

Adj. List

#iter = n
 While Q is not empty do

C_4 { $u \leftarrow Q.dequeue$
 $print(u)$ } $C_4 + C_3 \times out-deg(u)$

$C_3 \times out-deg(u)$ { For each edge (u,v) do {
 C_3 { $v.in-degree \leftarrow v.in-degree - 1$
 if $v.in-degree = 0$ then
 $Q.enqueue(v)$
 }
 }

$$C_2 + C_1 n + \sum_{u \in V} (C_4 + C_3 \times out-degree(u))$$

$$= C_2 + C_1 n + \sum_{u \in V} C_4 + C_3 \sum_{u \in V} out-degree(u)$$

$$= C_2 + C_1 n + C_4 n + C_3 m \text{ is } O(n+m)$$
