WEEK 4

THE RELATIONAL ALGEBRA - REVIEW

CS3319

STUDENT OBJECTIVES

- Upon completion of this video, you should be able to:
 - List the 9 operations used in Relational Algebra
 - Write some relational algebra expressions
 - Solve some queries given tables and relational algebra expressions

SUMMARY OF OPERATIONS

Table 6.1

Operations of Relational Algebra

Operation	Purpose	Notation
SELECT	Selects all tuples that satisfy the selection condition from a relation R .	$\sigma_{\langle \text{selection condition} \rangle}(R)$
PROJECT	Produces a new relation with only some of the attributes of R , and removes duplicate tuples.	$\pi_{\langle \text{attribute list} \rangle}(R)$
THETA JOIN	Produces all combinations of tuples from R_1 and R_2 that satisfy the join condition.	$R_1 \bowtie_{\langle \text{join condition} \rangle} R_2$
EQUIJOIN	Produces all the combinations of tuples from R_1 and R_2 that satisfy a join condition with only equality comparisons.	$R_1 \bowtie_{\langle \text{join condition} \rangle} R_2$, OR $R_1 \bowtie_{(\langle \text{join attributes 1} \rangle), (\langle \text{join attributes 2} \rangle)} R_2$
NATURAL JOIN	Same as EQUIJOIN except that the join attributes of R_2 are not included in the resulting relation; if the join attributes have the same names, they do not have to be specified at all.	$R_1 *_{\langle \text{join condition} \rangle} R_2$, OR $R_1 *_{(\langle \text{join attributes 1} \rangle), (\langle \text{join attributes 2} \rangle)} R_2$ OR $R_1 * R_2$
UNION	Produces a relation that includes all the tuples in R_1 or R_2 or both R_1 and R_2 ; R_1 and R_2 must be union compatible.	$R_1 \cup R_2$
INTERSECTION	Produces a relation that includes all the tuples in both R_1 and R_2 ; R_1 and R_2 must be union compatible.	$R_1 \cap R_2$
DIFFERENCE	Produces a relation that includes all the tuples in R_1 that are not in R_2 ; R_1 and R_2 must be union compatible.	$R_1 - R_2$
CARTESIAN PRODUCT	Produces a relation that has the attributes of R_1 and R_2 and includes as tuples all possible combinations of tuples from R_1 and R_2 .	$R_1 \times R_2$
DIVISION	Produces a relation $R(X)$ that includes all tuples $t[X]$ in $R_1(Z)$ that appear in R_1 in combination with every tuple from $R_2(Y)$, where $Z = X \cup Y$.	$R_1(Z) \div R_2(Y)$

FINAL REVIEW QUESTIONS

QUESTION: Write the expression to find all the employees last names and salaries who work in Head Office

The screenshot shows three database tables:

- Project Table:**

A1	Accounting Update	Toronto	S7G
A3	Acc3	Springfield	G8H
A6	Acc6	Toronto	S7G
I1	Inventory	Toronto	G8H
I2	Inventory2	London	S7G
P1	Payroll	Springfield	G8H
P2	Payroll2	London	G8H
P3	Payroll3	London	G8H
- Department Table:**

HEADOFF1 $\leftarrow \pi_{\text{DeptNumber}}(\sigma_{\text{deptName}=\text{"Head Office"}}(\text{DEPARTMENT}))$

ANS $\leftarrow \pi_{\text{LastName}, \text{Salary}}(\text{HEADOFF1} \bowtie \text{EMPLOYEE})$

QUESTION: Write the expression to list the name of each project, along with the name of the department it is assigned to, along with that department managers last name.

TEMP $\leftarrow \pi_{\text{DeptName}, \text{ManagerEmpID}, \text{ProjectName}}(\text{DEPARTMENT} \bowtie_{\text{DeptNumber}=\text{ManagingDeptNum}} \text{PROJECT})$

ANS $\leftarrow \pi_{\text{LastName}, \text{DeptName}, \text{ProjectName}}(\text{TEMP} \bowtie_{\text{ManagerEmpID}=\text{EmpID}} \text{EMPLOYEE})$

QUESTION: Retrieve the names of employees who have no dependents.

$ALL_EMPS \leftarrow \pi_{EmpID}(EMPLOYEE)$

$EMPS_WITH_DEPS(EmpID) \leftarrow \pi_{ESSN}(DEPENDENT)$

$EMPS_WITHOUT_DEPS \leftarrow (ALL_EMPS - EMPS_WITH_DEPS)$

$RESULT \leftarrow \pi_{LNAME, FNAME}(EMPS_WITHOUT_DEPS \bowtie EMPLOYEE)$

INTERESTING PROJECT – RELATIONAL ALGEBRA INTERPRETER

The screenshot shows a web browser window with the URL <https://bitbucket.org/naveenraj16/relational-algebra>. The page title is "naveenraj16 / Relational Algebra". On the left, there is a sidebar with "ACTIONS" (Clone, Compare, Fork) and "NAVIGATION" (Overview, Source, Commits, Branches, Pull requests, Downloads). The main content area is titled "Sample Interaction" and contains a list of steps. Step 1, "Display database schema", shows the output of the command `RA> schema;`, which lists several database tables and their attributes. Step 2, "Query from keyboard", shows the output of the command `RA> project[fname,minit,lname](employee join rename[ssn,a,b,c,d](dependent));`, which returns a list of names and the number of tuples (6).

4. `exit`
exit will terminate and leave the interpreter

Sample Interaction

1. Display database schema

```
RA> schema;

```

2. Query from keyboard

```
RA> project[fname,minit,lname](employee join rename[ssn,a,b,c,d](dependent));

ANSWER (FNAME:STRING,MINIT:STRING,LNAME:STRING)
