

Quiz Information

(Math 1229A Fall 2019)

1. Each quiz covers 2 text sections. Each quiz is available for a 6-day window, usually from a Wednesday to the following Monday. You can take the quiz *any time* during the quiz window. (See the *Quiz Schedule* document for details of coverage and timing of the quizzes.)
2. There is **no time limit** for the quiz (other than the quiz window closing). **However**, you should *try to complete the quiz in no more than 30 minutes*. If it's taking you longer than that to work through the quiz, you will most likely have trouble completing the Term Tests and Final Exam in the available time.
3. Every time a quiz is initiated, the quiz is randomly generated from a question databank of relevant questions. Your quiz is unlikely to have the same questions as your friend's quiz.
4. You can make **2 tries** at each quiz. But each try initiates a new quiz, so your second try is a new randomly generated quiz. (That is, it won't have the same questions as your first try.) Of the 2 quiz attempts, your **highest** mark will be the one that counts.
5. Each quiz window opens at 12:05 a.m. Eastern Time on the first day and closes at 11:55 p.m. Eastern Time on the last day.
6. Each quiz consists of 8 multiple choice questions.
7. There are 6 quizzes, with your **best 5** counting equally.
8. ***Quizzes in OWL do not work properly if you have multiple browser windows/tabs open. It is important that when you take a quiz you must have only one browser window open, with only one tab open in that window. (Or OWL will lose your quiz and you won't get the mark!) AND QUIZZES DO NOT WORK WELL ON PHONES! (Swiping may change your answers.) And they may not work well on tablets.***
