

Reminder.

Reference: all types (class, list, dict).

tuple => doesn't support changes.

set => no exact position.

column: [a:b] => [column[a], ..., column[b]]

strip: only works for the position at the end
(pos[0]/pos[-1]).

e.g. S = "123\$!"

print(S.rstrip("!\$"))

>>> 123.

↑
from the right

(lstrip)
print(S.strip(" \$"))

>>> 123\$!
